RE: 3M Qualitative Fit Testing

Fit testing is a required component of any respiratory protection program in which workers are required to wear tight-fitting respirators.

3M's two qualitative fit test kits meet OSHA's performance criteria for fit testing respirators under 29 CFR 1910.134, Appendix A. Two of these kits, FT-10 and FT-20, contain the solutions specified by the Saccharin Solution Aerosol Protocol; the other, FT-30, contains the solutions specified by the Denatonium Benzoate Solution Aerosol Qualitative Fit Test.

This letter serves to confirm that Siyakhulisa Skills Academy has received the 3M Train the Trainer demonstration training and has been deemed competent to conduct fit testing using the 3M Qualitative Fit Test kits.

Should you have any further questions, please do not hesitate to contact me.

Kind regards

Rani Naidoo
